## **CLAIMS**

1. (Amended) Integrated circuitry comprising a capacitor comprising a first capacitor electrode, a second capacitor electrode and a high K capacitor dielectric region received therebetween; the high K capacitor dielectric region comprising a high K substantially amorphous material layer and a high K substantially crystalline material layer, the high K substantially amorphous material and the high K substantially crystalline material constituting different chemical compositions, the high K substantially crystalline material being received over the high K substantially amorphous material; and

wherein the high K substantially crystalline material layer is at least 70% crystalline.

- 4. The integrated circuitry of claim 1 wherein at least one of the first and second electrodes comprises elemental metal, metal alloy, conductive metal oxides, or mixtures thereof.
- 5. The integrated circuitry of claim 1 wherein at least one of the high K substantially amorphous material layer and the high K substantially crystalline material layer contacts at least one of the first capacitor electrode and the second capacitor electrode.

- 6. The integrated circuitry of claim 1 wherein the high K substantially amorphous material layer contacts at least one of the first capacitor electrode and the second capacitor electrode.
- 7. The integrated circuitry of claim 6 wherein the high K substantially amorphous material layer contacts only one of the first capacitor electrode and the second capacitor electrode.
- 8. The integrated circuitry of claim 1 wherein the high K substantially amorphous material layer contacts one of the first and second capacitor electrodes and the high K substantially crystalline material layer contacts the other of the first and second capacitor electrodes.
- 9. The integrated circuitry of claim 1 wherein the high K capacitor dielectric region is the only capacitor dielectric region received between the first and second capacitor electrodes, and consists essentially of the high K substantially amorphous material layer and the high K substantially crystalline material layer.
- 10. The integrated circuitry of claim 1 wherein the high K substantially amorphous material layer is at least 98% amorphous, and the high K substantially crystalline material layer is at least 98% crystalline.

July 1

- 11. (Amended) The integrated circuitry of claim 1 comprising a semiconductor substrate, the capacitor being received at least partially over the semiconductor substrate, the high K substantially amorphous material layer being received between the semiconductor substrate and the high K substantially crystalline material layer.
- 12. The integrated circuitry of claim 11 wherein the semiconductor substrate comprises bulk monocrystalline silicon.
- 13. The integrated circuitry of claim 11 wherein at least one of the high K substantially amorphous material layer and the high K substantially crystalline material layer contacts at least one of the first capacitor electrode and the second capacitor electrode.
- 14. The integrated circuitry of claim 11 wherein the high K substantially amorphous material layer contacts at least one of the first capacitor electrode and the second capacitor electrode.
- 15. The integrated circuitry of claim 1 comprising a semiconductor substrate, the capacitor being received at least partially over the semiconductor substrate, the high K substantially amorphous material layer being received between the semiconductor substrate and the high K substantially crystalline material layer.

16. The integrated circuitry of claim 15 wherein the semiconductor substrate comprising bulk monocrystalline silicon.

# New claims:

- 56. (New) The integrated circuitry of claim 1 wherein the high K substantially amorphous material layer is at least 70% amorphous.
- 57. (New) The integrated circuitry of claim 1 further comprising a substrate supporting the first and second capacitor electrodes, and an insulative layer intermediate the substrate and the first and second capacitor electrodes.
- 58. (New) The integrated circuitry of claim 57 wherein the insulative layer comprises an oxide layer.
- 59. (New) The integrated circuitry of claim 57 wherein the insulative layer comprises silicon dioxide.
- 60. (New) The integrated circuitry of claim 1 wherein the high K substantially amorphous material layer comprises a thickness in a range of about 20 Ångstroms to about 250 Ångstroms.

61. (New) The integrated circuitry of claim 1 wherein the high K substantially crystalline material layer comprises a thickness in a range of about 20 Ångstroms to about 90 Ångstroms.

62. (New) The integrated circuitry of claim 1 wherein the high K capacitor dielectric region comprises a thickness in a range of about 40 Ångstroms to about 500 Ångstroms.
